                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to the novel use of irinotecan or its derivative for the preparation of pharmaceutical compositions for treating colorectal, cervical, gastric, lung, ovarian or parcreatic cancer, or malignant glioma in a subject having a genome with a variant allele which comprises a multidrug resistance 1 (MDR1) polynucleotide. A composition of the invention has cytostatic activity. The invention is useful for the preparation of pharmaceutical compositions for treating colorectal, cervical, gastric, lung, ovarian or pancreatic cancer, or malignant glioma in a subject (preferably human, more preferably African or Asian) or a mouse. The present sequence is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               irinotecan; colorectal cancer; cervical cancer; gastric cancer;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates ro a novel use of irinotecan or its derivative for the preparation of a pharmaceutical composition for treating colorectal, cervical, gastric, lung, ovarian or pancreatic cancer, or malignant glioma in a subject having a genome with a variant allele which comprises a multidrug resistance 1 (MDR1) polynucleotide. A composition of the invention has cytostatic activity. The present sequence is used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New use of irinotecan for preparation of pharmaceutical compositions for treating cancer in subject having genome with variant allele comprising multidrug resistance 1 polynucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           23-JUL-2001; 2001EP-00117608.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC ltranscription units that populate a (sun-)transcriptone, where the (sun-)transcriptone comprises messenger RNAs transcribed from multiple CC oligonuclectides, each capable of hybridising selectively to a set of CC messenger RNAs transcribed from a given transcription unit of the genome, which encodes one or more messenger RNA splice variants. The CC which encodes one or more messenger RNA splice variants. The CC disjonuclectide libraries are useful for detecting mRNAs from a CC disjonuclectide libraries are useful for detecting mRNAs from a CC disjonuclecting RNA transcripts and splice variants of numan or animal CC detecting RNA transcripts and splice variants of numan or animal CC detecting RNA transcripts and splice variants of appealaised mini CC disponucles. The libraries may also be used as specialised mini CC biological or pathological state, and so allowing the detection of tissue and pathology-specific genes such as those genes only expressed in Specific tissue under a specific pathological condition; to detect CC developmental specific genes; and to detect RNA transcripts and splice variants of a transcriptome of a patticular CC developmental specific genes; and to detect RNA transcripts and splice CC variants of a transcriptome of a pattient suffering from a particular CC disorder. ABN27253 to ABN59589 represent oligonuclectide sequences from CC present invention. N.B. The sequence data for this patent did not form CC part of the printed specification, but was obtained in electronic format CC directly from WIPO at ftp..wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

```

The invention relates to diagnosing a corticotropin-releasing hormone (CRH)-induced gene expression profile in an individual. The method involves determining the level of gene transcription of a gene comprising a nucleic acid sequence selected from 28 nucleotide sequences fully defined in the specification or determining the amount of at least one protein that modulates CRH signaling in the sample, where the protein comprises 13 amino acid sequences given in the specification. The methods and composition are useful for diagnosing, treating and/or preventing CRH metabolism-related disorders, such as CRH-induced depression or stress. The polymucleotide is used as a marker of CRH signaling in a cell. These composition and methods may also be used in identifying compounds that modulate CRH-induced depression and stress. The present sequence represents a specific example of a gene fragment that is an important mediator of CRH-induced changes in the CNS.

Sequence 354 BP; 107 A; 71 C; 68 G; 108 T; 0 U; 0 Other;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Scoring table:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence:
                                            000000
  pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                         Score
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         nucleic search, using sw

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SUMO-1 binding molecules or antisense molecules are useful for treating a subject having or at risk of developing haematologic malignancy or MDR (e.g. a lymphoid disorder or a myeloid disorder. The lymphoid disorders include lymphocytic leukaemia or chronic lymphoproliferative disorders e.g. lymphoma, myeloma or chronic lymphoid leukaemia. The myeloid disorders include chronic or acute myeloid leukaemia, e.g. angiogenic myeloid metaplasia, essential thrombocythaemia or polycythaemia vera. The invention is used in gene therapy. The present sequence is human mdrl

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a method of treating a subject having or at risk of developing a haematologic malignancy or multidrug resistance (MDR). The method involves administering hypoxia inducible factor-1 (HIF-1) binding molecules or small ubiquitin-like-modifier (SUMO)-1 binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ement

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method of treating a subject having or at risk CC of developing a haematcologic malignancy or multidrug resistance (MDR). CC The method involves administering hypoxia inducible factor-1 (HIF-1) CC binding molecules or small ubiquitin-like-modifier (SUMO)-1 binding molecules or amaisense modelic acid molecules and CC element (HRE) binding molecules or antisense nucleic acid molecules and CC SUMO-1 binding molecules or antisense molecules are useful for treating a CC e.g. a lymphoid disorder or a myeloid disorder). The lymphoid disorders include lymphocytic leukaemia or chronic lymphoproliferative disorders ce.g. lymphone, myeloma or chronic lymphoid leukaemia. The myeloid CC myeloid metaplasia, essential thrombocytheemia ergence is an antisense CC invention is used in gene therapy. The present sequence is an antisense CC oligo targetted to HRE in the mdr1 gene (mdr1-HRE) to inhibit its cCC expression. This oligo is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
   The invention relates to a primer for amplifying a nucleic acid comprising a 15 to 30 base continuous oligonucleotides of an MDR1 (multiple drug resistance gene 1) gene fragment appearing as ABK87740. Also included are a kit for quantitatively determining the expression level of MDR1 gene, a probe for capturing a nucleic acid, a reagent fo amplifying a nucleic acid and diagnosis of the drug resistance of a patient. The primer is useful for the determination of MDR expression level by nucleic acid amplification. The present sequence is a fragmen
                                                                                                                                                                                                                                                                                                                                                                       A primer for amplifying a nucleic acid comprises a specific oligonucleotide sequence for determination of Multiple Drug gene expression level by nucleic acid amplification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 2002-552738/59.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a primer for amplifying a nucleic acid comprising a 15 to 30 base continuous oligonucleotides of an MDR1 (multiple drug resistance gene 1) gene fragment appearing as ABR8740. Also included are a kit for quantitatively determining the expression level of MDR1 gene, a probe for capturing a nucleic acid, a reagent for amplifying a nucleic acid and diagnosis of the drug resistance of a patient. The primer is useful for the determination of MDR expression level by nucleic acid amplification. The present sequence is a fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A primer for amplifying a nucleic acid comprises a specific oligonucleotide sequence for determination of Multiple Drug gene expression level by nucleic acid amplification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 120 BP; 28
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MDR1; ds; multiple drug resistance gene; nucleic acid amplification; MDR1 expression level; multiple drug resistance.
